Training Description
Target Audience: (Caregivers, Educators, Administrators, Related Service Professionals: Intermediate Level)

With up to one in three children struggling with anxiety in this country, overwhelmed adults require a new approach as well as a practical and easy-to-implement toolkit of strategies that work. Students with autism are at greater risk than their typically developing peers for developing anxiety and anxiety disorders such as phobias, OCD, and social anxiety disorder. In the time of COVID-19, and the subsequent societal changes, anxiety has become ever-present in students of all ages.

Through the use of case studies, humorous stories, and examples of everyday challenging situations, participants will learn easy to implement preventive tools, strategies, and interventions for reducing anxiety, increasing self-regulation, accurate thinking, and self-monitoring in students. Virtual classroom and traditional classroom examples will be shared.

Training Objectives
Participants will be able to:

- List common antecedents for students with anxiety.
- Identify why common teacher practices and interventions may not always work for students with anxiety-related behavior.
- List strategies for reducing negative thinking toward writing.
